

CLAIM AMENDMENTS:

1. (currently amended) A method for manufacturing a disposable wearing article, comprising:

a step of cutting a web in a length direction ~~so that a of the web into a first web and a second web, each having~~ concave portions and a convex portions ~~appear~~ alternately;

a step of attaching a cover sheet to ~~bridge between cut the~~ first web and ~~the~~ second web;

a step of ~~widening~~ spacing the first web and the second web ~~to which from each other, the cover sheet is attached being expanded as the first web and the second web are spaced~~; and

a step of attaching an absorber onto the expanded cover sheet.

Claim 2 (canceled).

3. (currently amended) The method for manufacturing a disposable wearing article according to Claim 1, wherein:

the cover sheet is provided with slack ~~comparable to widening~~ when attached to bridge between the webs or between the concave and convex portions, the slack being comparable to an expanded amount of the cover sheet generated in the step of spacing the first web and the second web.

Claim 4-7 (canceled).

8. (currently amended) The method for manufacturing a disposable wearing article according to Claim 1, further comprising:

a step of side-sealing both side portions of the first web and the second web ~~or both side portions of the first elastic laminated body and the second elastic laminated body~~ while the absorber is in a folded state.

9. (previously presented) The method for manufacturing a disposable wearing article according to Claim 1, further comprising:

a step of forming leg hole portions.

10. (currently amended) A method for manufacturing a disposable wearing article, comprising:

a step of manufacturing an elastic laminated body by laminating two webs, ~~while inserting~~ an elastic member being in an extended state in a web length direction ~~in between the two webs;~~

a step of cutting the elastic laminated body in a length direction ~~so that a of the elastic laminated body into a first elastic laminated body and a second elastic laminated body, each having~~ concave portions ~~and a convex portions appear~~ alternately;

a step of attaching a cover sheet to ~~bridge between~~ the concave portion ~~and the convex portion of~~ cut the first elastic laminated body and the convex portion of the second elastic laminated body, ~~respectively;~~

a step of ~~widening~~ spacing the first elastic laminated body and the second elastic laminated body ~~to which from each other, the cover sheet is attached being~~ expanded as the first elastic laminated body and the second elastic laminated body are spaced; and

a step of attaching an absorber onto the expanded cover sheet.

11. (currently amended) The method for manufacturing a disposable wearing article according to Claim 10, wherein:

the cover sheet is provided with slack ~~comparable to widening~~ when attached to bridge between the webs or between the concave and convex portions, the slack being comparable to an expanded amount of the cover sheet generated in the step of spacing the first web and the second web.

12. (previously presented) The method for manufacturing a disposable wearing article according to Claim 10, wherein:

the elastic member includes a waist elastic member, a body-fitting elastic member, and a leg peripheral elastic member, and the leg peripheral elastic member is in a state where the leg peripheral elastic member is provided in a linear state or a curved line state in a width direction of the wearing article or in a state having the both states.

13. (currently amended) The method for manufacturing a disposable wearing article according to Claim 10, further comprising:

~~a step of side-sealing both side portions of the first web and the second web~~
er both side portions of the first elastic laminated body and the second elastic laminated body while the absorber is in a folded state.

14. (previously presented) The method for manufacturing a disposable wearing article according to Claim 10, further comprising:

a step of forming leg hole portions.

15. (currently amended) A method for manufacturing a disposable wearing article, comprising:

a step of cutting an outer surface web in a length direction of the outer surface web into a first outer surface web and a second outer surface web;

a step of ~~widening out~~ spacing the first outer surface web and the second outer surface web from each other;

a step of cutting an inner surface web in a length direction so that a concave portion and a convex portion appear alternately of the inner surface web into a first inner surface web and a second inner surface web;

a step of widening spacing the first inner surface web and the second inner surface web from each other;

a step of manufacturing a first elastic laminated body and a second elastic laminated body by laminating the first outer surface web to the first inner surface web₁ and the second outer surface web to the second inner surface web₂ while inserting an elastic members being in an extended state in a web length direction in between the first and second outer surface webs and the first and second inner surface webs, respectively; and

a step of attaching an absorber to bridge between the first inner surface web elastic laminated body and the second inner surface web elastic laminated body which are spaced from each other.

16. (currently amended) The method for comprising manufacturing a disposable wearing article according to Claim 45 28, further comprising:

a step of shifting the first inner surface web and the second inner surface web in the length direction so that concave portions of the respective webs oppose each other.

17. (previously presented) The method for manufacturing a disposable wearing article according to Claim 15, wherein:

the elastic member includes a waist elastic member, a body-fitting elastic member, and a leg peripheral elastic member, and the leg peripheral elastic member is in a state where the leg peripheral elastic member is provided in a linear state or a curved line state in a width direction of the wearing article or in a state having the both states.

18. (currently amended) The method for manufacturing a disposable wearing article according to Claim 15, further comprising:

a step of side-sealing ~~both side portions of the first web and the second web~~ or both side portions of the first elastic laminated body and the second elastic laminated body while the absorber is in a folded state.

19. (previously presented) The method for manufacturing a disposable wearing article according to Claim 15, further comprising:

a step of forming leg hole portions.

20. (currently amended) A method for manufacturing a disposable wearing article, comprising:

a step of cutting an inner surface web in a length direction ~~so that a concave portion and a convex portion appear alternately~~ of the inner surface web into a first inner surface web and a second inner surface web;

a step of ~~widening cut~~ spacing the first inner surface web and the second inner surface web from each other;

a step of manufacturing a first elastic laminated body and a second elastic laminated body by laminating an outer surface web to over the first inner surface web and to the second inner surface web, while inserting an elastic members being in an extended state in a web length direction in between the outer surface web and the first and second inner surface webs, respectively, the first elastic laminated body and the second elastic laminated body being connected via the outer surface web; and

a step of attaching an absorber to ~~bridge between~~ the first inner surface web and the second inner surface web which are spaced from each other; and

a step of forming a leg hole portion in the outer surface web.

21. (currently amended) The method for ~~comprising manufacturing~~ a disposable wearing article according to Claim ~~20~~ 27, further comprising:

a step of shifting the ~~cut~~ first inner surface web and the second inner surface web in the length direction so that concave portions of the respective webs oppose each other.

22. (previously presented) The method for manufacturing a disposable wearing article according to Claim 20, wherein:

the elastic member includes a waist elastic member, a body-fitting elastic member, and a leg peripheral elastic member, and the leg peripheral elastic member is in a state where the leg peripheral elastic member is provided in a linear state or a curved line state in a width direction of the wearing article or in a state having the both states.

23. (currently amended) The method for manufacturing a disposable wearing article according to Claim 20, further comprising:

a step of side-sealing ~~both side portions of the first web and the second web~~ or ~~both~~ side portions of the first elastic laminated body and the second elastic laminated body while the absorber is in a folded state.

Claim 24 (canceled).

25. (new) The method for manufacturing a disposable wearing article according to claim 15, wherein:

in the step of cutting the outer surface web, the outer surface web is cut to defined straight cut edges.

26. (new) The method for manufacturing a disposable wearing article according to claim 25, further comprising:

a step of forming a leg hole portion in the first and second outer surface webs.

27. (new) The method for manufacturing a disposable wearing article according to claim 20, wherein:

in the step of cutting the inner surface web, the inner surface web is cut to thereby have concave portions and convex portions alternately.

28. (new) The method for manufacturing a disposable wearing article according to claim 15, wherein:

in the step of cutting the inner surface web, the inner surface web is cut to thereby have concave portions and convex portions alternately.

29. (new) The method for manufacturing a disposable wearing article, comprising:

a step of manufacturing an elastic laminated body by laminating two webs, an elastic member being in an extended state in a web length direction between the two webs;

a step of cutting the elastic laminated body in a length direction of the elastic laminated body into a first elastic laminated body and a second elastic laminated body, each having straight cut edge;

a step of spacing the first elastic laminated body and the second elastic laminated body from each other;

a step of attaching an absorber to the first elastic laminated body and the second elastic laminated body which are spaced from each other; and

a step of forming a leg hole portion in the first and second elastic laminated bodies.
